

Committee on Technical Barriers to Trade

NOTIFICATIONS ISSUED DURING THE MONTH OF FEBRUARY, 2022

In the Second Triennial Review of the Operation and Implementation of the TBT Agreement (concluded in November 2000), Members instructed the Secretariat to prepare a monthly list of notifications. The attached table contains a list of all notifications issued during the month of February 2022, which includes a total of new notifications by Members.

Notifying Member	Notification/ Date of Circulation	Articles	Product/Measure	Objective	Deadline for Comments
Australia	G/TBT/N/AUS/137 25 February 2022	<input checked="" type="checkbox"/> 2.9.2 <input type="checkbox"/> 2.10.1 <input type="checkbox"/> 5.6.2 <input type="checkbox"/> 5.7.1 <input type="checkbox"/> Others 3.2 <input type="checkbox"/> Others 7.2	Toys for children up to and including 36 months of age are products which are designed, manufactured, labelled and marketed as playthings or are clearly intended for use in play by a child up to and including 36 months of age.	<p>The current mandatory safety standard was introduced in 2003 to minimise the risk of young children choking or suffocating on small parts in toys, therefore preventing serious injury or death.</p> <p>The new mandatory safety standard will maintain the existing level of safety for consumers by reducing the chances of small parts coming off toys during play or after reasonable wear and tear, therefore helping to prevent choking, suffocation, or death.</p> <p>Referencing the latest edition of the voluntary Australian standard will ensure suppliers' regulatory obligations remain clear and consistent whilst maintaining consumer protections.</p> <p>In addition, referencing overseas standards reduces the regulatory burden on suppliers in the form of reduction in administrative, testing and compliance costs where a product already conforms to overseas requirements.</p>	29 April 2022

Denmark	G/TBT/N/DNK/125 9 February 2022	<input checked="" type="checkbox"/> 2.9.2 <input type="checkbox"/> 2.10.1 <input type="checkbox"/> 5.6.2 <input type="checkbox"/> 5.7.1 <input type="checkbox"/> Others 3.2 <input type="checkbox"/> Others 7.2	The notification covers recharging points accessible to the public.	<p>In order to strengthen the Danish implementation of Directive 2014/94/EU of the European Parliament and of the Council of 22 October 2014 on the deployment of alternative fuels infrastructure (the AFI Directive), it is intended to open up the recharging market and create transparent prices. The aim is to provide users of electric vehicles an easy access to a single network of publicly accessible recharging points where charging can be carried out on an ad hoc basis at reasonable and non-discriminatory prices.</p> <p>It is therefore proposed that operators of publicly accessible recharging points should provide widespread payment solutions, including accepting regular payment cards for charging by fast chargers when the recharging point is located on public land or a recharging point is established with public subsidies. The Ministry of Transport considers that payment cards are the most common form of payment instrument available to both Danish and foreign users of electric vehicles. In order to ensure easy and equal access to charges for recharging at publicly accessible recharging points on public land for Danish and foreign users, the Ministry of Transport considers that it would be appropriate to lay down requirements for payment card readers.</p>	22 March 2022
---------	------------------------------------	--	---	--	---------------

				<p>It is also proposed that operators of publicly accessible recharging points with a power of less than 50 kW may choose to offer the provision of charging services (roaming) as an exception to the general rule of payment via payment card readers. The proposed provisions on roaming support the implementation of article 4(8)(2) of the AFI Directive. Access to roaming services can benefit users of electric vehicles, as it will enable users to invoice their consumption at recharging points from different operators via a single customer relationship and avoid having to pay the recharging point operator directly.</p> <p>It is also proposed that recharging points accessible to the public should display a list price per kWh and the total purchase price in an electronic display. The provision on signage of prices in electronic display is established with a view to promoting an open and transparent charging market in Denmark and in order to support the existing implementation of Article 4(10) of the AFI Directive on easily and clearly comparable, transparent and non-discriminatory charging prices.</p>

	<p>G/TBT/N/EU/873 11 February 2022</p>	<p><input checked="" type="checkbox"/> 2.9.2 <input type="checkbox"/> 2.10.1 <input checked="" type="checkbox"/> 5.6.2 <input type="checkbox"/> 5.7.1 <input type="checkbox"/> Others 3.2 <input type="checkbox"/> Others 7.2</p>	<p>In vitro diagnostic medical devices</p>	<p>The objective of this Implementing Regulation is to set uniform requirements for the devices in an area where no harmonised standards exist or where they are not sufficient, and where there is a need to address public health concerns. The common specifications (CS) provide a presumption of conformity with the corresponding legal requirements of Regulation (EU) 2017/746. Therefore they will greatly facilitate the work of manufacturers in complying with the legislation, the assessment by the notified bodies, testing by EU reference laboratories and oversight by the national competent authorities. Moreover, they will facilitate an aligned approach to conformity assessment of these devices across the Union and the achievement of consistently high standards of device performance. They will contribute to ensuring a high level of public health and patient safety as well as an equal level playing field for all industry actors and a better functioning of the EU's internal market.</p> <p>The adoption of the CS is one of the high priority actions identified in the Joint Implementation and Preparedness Plan for Regulation (EU) 2017/746. As soon as the CS will be available, notified bodies will not be obliged to submit the manufacturer's performance</p>	<p>13 March 2022</p>
--	--	--	--	---	----------------------

				evaluation report for class D devices covered by the CS to the expert panel in accordance with Article 48(6) of Regulation (EU) 2017/746. The CS will also facilitate the preparation of technical documentation by the manufacturers and speed up its assessment by the notified bodies. This act will therefore accelerate conformity assessment procedures and thereby free up notified body capacities. As this is the main challenge related to the implementation of Regulation (EU) 2017/746, the CS should be adopted as soon as possible, justifying a reduced commenting period.

Law No. 2020-105 of 10 February 2020 on combating waste and on the circular economy introduces numerous provisions aimed in particular at improving the recyclability of products placed on the market by producers or contractors. In order to limit the risks posed to human health and to promote the use of materials from recycled packaging or paper, it provides for a gradual ban on mineral oils in packaging and then in printed matter distributed to the public. The danger of these substances and the risk of their migration from packaging containing recycled paper or cardboard to foodstuffs were highlighted by ANSES in its opinion of 8 March 2017. The provisions of the draft Order specify the substances concerned in a gradual manner over time. The designated substances and their limits are based on the ANSES opinion of 8 March 2017. Provision is also made for the disposal of stocks; Other</p>	4 April 2022
--------	------------------------------------	--	---	---	--------------

	<p>G/TBT/N/FRA/217 3 February 2022</p>	<p><input checked="" type="checkbox"/> 2.9.2 <input type="checkbox"/> 2.10.1 <input type="checkbox"/> 5.6.2 <input type="checkbox"/> 5.7.1 <input type="checkbox"/> Others 3.2 <input type="checkbox"/> Others 7.2</p>	<p>Battery-operated and household vacuum cleaners</p>	<p>Directive (EU) 2018/851 on waste encourages Member States to take appropriate measures to prevent waste generation. In addition, one of the objectives of the European action plan for the circular economy (COM (2020) 98) is to improve the durability and reparability of products. The stakeholder consultation held in the context of the Roadmap for the circular economy, which was presented by the Government on 23 April 2018, resulted in measure No. 10, which provides for mandatory information on the reparability of electrical and electronic products. The measure aims to promote responsible consumption by improving consumer information through the establishment and mandatory display of a simple reparability index for some of these products. This index aims to inform the consumer regarding how easy it is to repair the product concerned. This measure thus aims on the one hand to compensate for the asymmetry of information between consumers and manufacturers or distributors concerning the reparability of products and, on the other hand, to encourage manufacturers to integrate reparability criteria into the design of their products, thus tending towards products that are more durable because they are more robust because they are 'eco-designed'. With this</p>	<p>4 April 2022</p>
--	--	---	---	--	---------------------

				<p>measure, a reasonable ambition is to reduce breakdowns of electrical and electronic products giving rise to repair in the network of French repairers to 60%, within five years, as compared to around 40% today. From an environmental standpoint, this measure will allow France to pursue its national objective of reducing the resource consumption linked to French consumption: to reduce resource consumption relative to GDP by 30% compared to 2010, by 2030 (Law No. 2015-992). More repairable and therefore more durable products will effectively lead to a reduction in resource consumption (reduction in the need for new products), a reduction in the quantity of waste electrical and electronic products and an associated reduction in greenhouse gas emissions.</p> <p>The cordless vacuum cleaners category was selected for implementation of the repairability index because these appliances are in general use in France, and because of the impact of this use on household budgets and the environmental impacts generated by this product; Protection of the environment.</p>

				<p>measure, a reasonable ambition is to reduce breakdowns of electrical and electronic products giving rise to repair in the network of French repairers to 60%, within five years, as compared to around 40% today. From an environmental standpoint, this measure will allow France to pursue its national objective of reducing the resource consumption linked to French consumption: to reduce resource consumption relative to GDP by 30% compared to 2010, by 2030 (Law No. 2015-992). More repairable and therefore more durable products will effectively lead to a reduction in resource consumption (reduction in the need for new products), a reduction in the quantity of waste electrical and electronic products and an associated reduction in greenhouse gas emissions.</p> <p>The category of cordless vacuum cleaners was selected for implementation of the repairability index because these appliances are in general use in France, and because of the impact of this use on household budgets and the environmental impacts generated by this product; Protection of the environment.</p>

In addition, one of the objectives of the European action plan for the circular economy (COM (2020) 98) is to improve the durability and reparability of products. The stakeholder consultation held in the context of the Roadmap for the circular economy, which was presented by the Government on 23 April 2018, resulted in measure No. 10, which provides for mandatory information on the reparability of electrical and electronic products. The measure aims to promote responsible consumption by improving consumer information through the establishment and mandatory display of a simple reparability index for some of these products. This index aims to inform the consumer regarding how easy it is to repair the product concerned. This measure thus aims on the one hand to compensate for the asymmetry of information between consumers and manufacturers or distributors concerning the reparability of products and, on the other hand, to encourage manufacturers to integrate reparability criteria into the design of their products, thus tending towards products that are more durable because they are more robust because they are 'eco-designed'. With this</p>	<p>4 April 2022</p>
